

**NT OBJECTives, Inc.** is a leading team of information security professionals, bringing together some of the most impressive technology and consulting minds available today. With a deep background in many of the industry's leading technologies, NTO is committed to delivering the next-generation technologies needed to secure the growing, dynamic threat in web applications and web services. Combined with a comprehensive suite of professional services, NT OBJECTives provides our clients with complete application security solutions to ensure the highest levels of risk management and compliance.

Refined over hundreds of engagements with today's Global 1000 and government clients, our best-of-breed services focus on rapidly achieving results in order to ensure the highest levels of application security. Our consultants work with clients through this process to not only become aware of their security exposure, but also to understand the nature of threat, how to mitigate it, and how to build/adopt processes to prevent and address future threats.

### **Application Security and Product Services**

#### ***Web Application Assessment***

Web application security assessments determine the application's risk as defined by its ability to maintain the integrity of data and business processes, uninterrupted availability of service and confidentiality of customer data. NTO examines the application with an established methodology that includes manual techniques developed from significant experience in the field, custom tools to improve efficiency and accuracy of testing, and open-source tools.

#### ***Application Source Code Review***

Application Code Review services identify common programming errors that expose the application to buffer overflow attacks, input validation attacks, and lapses on security logic. These services provide a very granular level of review on the actual application source code in order to ensure that best practices of secure coding are in place, thus providing the highest level of scrutiny. NTO examines the application with an established methodology that includes manual techniques developed from significant experience in the field, custom tools to improve efficiency and accuracy of testing, and open-source tools.

#### ***Product Testing Services***

NTO Product Testing Services assist vendor companies to ensure that new or enhanced technologies are delivered to market with the highest levels of security testing. Product security audits determine the relative security of hardware/appliance or software technologies, and assist in the development of best practices to apply throughout current and future product development cycles. With numerous options available, vendors may select from a multitude of product testing services from cursory security review to detailed analysis of product source code.

## Application Security Training

### **Customized Courses**

- ❖ Private, onsite instruction
- ❖ 1, 2 or 3 day courses
- ❖ Hands-on instruction ensures practical knowledge and use
- ❖ Top instructors provide individual attention

### **Customizable Content/Instruction**

- ❖ Application Architecture Security
- ❖ Authorization Controls
- ❖ Encryption and Random Number Controls
- ❖ Platform Architecture Security
- ❖ Practical Use of Technology – Putting Freeware to Work
- ❖ Secure Coding & Code Review

Our service offering is designed to be flexible and responsive to customer needs. As such, we structure our work with the client on an individual basis, so we can ensure each client is best served for their unique needs. Scope of engagements can be customized beyond standard deliverables to include **Remediation Services, Secure Architecture Deployment, Policy and Planning**, as well as **Network and Host Security Training**.

NTO is committed to becoming your partner in application security- providing a complete range of services and technologies to work with you in securing your enterprise. Our solutions allow you to securely deploy web applications and web services while improving security staff productivity and reducing total cost of ownership for security solutions. Talk to our industry leading team today to see what we can do for you.
