

NTOBJECTives and Veracode Partner to Provide Web Application Security Testing

NTOBJECTives integrates its Web application scanning technology into Veracode's on-demand application security testing solution

Irvine, California – August 8, 2007 – NT OBJECTives, Inc. an innovative provider of application security solutions, today announced it has partnered with Veracode, Inc., to integrate its Web application scanning technology into the Veracode on-demand SecurityReview™ application security testing solution.

By integrating NT OBJECTives' dynamic Web application scanning technology into the Veracode on-demand application security platform, organizations gain operational insight into software security risks for their multi-tier, front office and back office applications through a single on-demand service and user experience.

Veracode has designed the first complete, automated application security solution that incorporates multiple vulnerability scanning technologies in an integrated on-demand service that makes it easy and cost-effective for enterprises to test and remediate security vulnerabilities in applications. Based on its centralized on-demand infrastructure, Veracode SecurityReview can deliver results in a matter of hours to globally distributed teams. "Veracode's on-demand platform is an innovative solution that will fill an important customer need and NTO is honored to be selected as part of that offering," said JD Glaser, CEO of NT OBJECTives, Inc.

"Our vision at Veracode is to reduce the number of software vulnerabilities in the industry by making it easy and cost effective for all companies to test their applications for security risks, whether they are developing applications in house or purchasing applications from a third party vendor," said Matt Moynahan, president and CEO of Veracode. "By working with NTO, we can offer our customers innovative and market leading technologies for both static and dynamic scanning from the same solution provider."

"Veracode's technical team conducted a thorough investigation of the available web application vulnerability assessment tools on the market. We believe NT OBJECTives' technology will be a strong addition to Veracode's on-demand platform based on its comprehensive coverage, accuracy and market leading automation," said Chris Wysopal, Veracode founder and chief technology officer.

About NT OBJECTives

NT OBJECTives is an innovative provider of comprehensive application security solutions designed to help organizations discover threats, analyze risk and develop sound security strategies. Its unique technology provides automated and accurate application vulnerability assessment regardless of site complexity, while its world-renowned team of security professionals provides expert knowledge transfer and technical services to help businesses understand, build and achieve application security compliance. NT OBJECTives is located in Irvine, California.

About Veracode

Veracode is the industry's first provider of automated, on-demand application security solution. Created by a world-class team of application security experts from @stake, Guardent, ISS, VeriSign and Symantec, the company delivers services to identify software flaws introduced through coding errors or malicious intent. Veracode's core service, SecurityReview™, uses patented binary code analysis that is uniquely able to inspect entire application inventories, including components, and does not require companies to expose their valuable source code. Enterprises can now protect their intellectual property while preventing attacks allowed by vulnerabilities in applications.

As the most accurate and comprehensive solution, Veracode makes it simple and cost-effective to implement application security best practices and reduce operational costs related to manual reviews. Whether a company is developing applications internally, purchasing software or integrating code from partners, Veracode SecurityReview provides insight to the security level of your applications. Outsourcing code analysis to Veracode is the easiest way to secure your software. With a pragmatic approach to application security, Veracode helps you fix what matters most to your business.

Based in Burlington, Mass., Veracode is backed by .406 Ventures, Atlas Venture and Polaris Venture Partners. www.veracode.com
